Gutter Cleaning

Here at Becheley Building Maintenance we use a water fed pole system that reaches up to 35ft in height, which means the majority of our work is undertaken from ground level making it easier to clean above conservatories and immovable objects around the house. This in turn makes it a quicker job than if we used ladders and therefore keeps the cost down to a very affordable price for our customers.

When the rain starts falling the gutters on your home help to route the water away from your foundation. To function properly, it is essential that they are free of leaves, silt and other common debris.

If they are not, the down pipes will clog up and rainwater will fill the gutters, back up, overflow, and eventually pull gutters loose from their mountings.

Down pipes, if blocked can cause the whole gutter system to malfunction so it is essential that they are kept clear at all times. Thankfully if you have the right tools for the job a blocked down pipe can be cleared relatively quickly and having the very latest water fed pole system to jet the down pipe out from the top down certainly helps!

Once we have cleared and cleaned the guttering and down pipe system we will then check the drainage flow and correct any issues if needed.

If we find any broken seals, brackets, clips or any other faults with the guttering system we are fully equipped to carry out the necessary repairs if requested by the customer.

In most cases the customer can work out how much it will cost before calling us by using our price planner. If your requirements are not found on the price planner please call us for a quote as we will be able to offer a very accurate estimate over the phone, which is done with the use of a satellite imaging programme.
